REVIEW

Reusable Learning Objects as a Learning Resource for Life Skills in Institutes of Higher Learning: A Systematic Review

Vanessa Vinodhen

Centre for Teaching and Learning Development, Nanyang Polytechnic, Singapore 569830, Singapore

ABSTRACT

This systematic review examines the potential of Reusable Learning Objects (RLOs) as an effective learning resource for integrating life skills into the Institute of Higher Learning (IHL) curriculum in Singapore. Following the Ministry of Education's 2022 recommendation for life skills curriculum revision, this study employed a systematic literature review methodology to analyze peer-reviewed articles, government documents, and educational reports published between 2010–2024. Using specific inclusion criteria focused on RLOs, life skills education, and higher education contexts, 45 relevant studies were identified and analyzed. Key findings indicate that: (1) RLOs significantly enhance student engagement in life skills learning, with 75% of studies reporting improved learning outcomes; (2) modular and interactive features of RLOs address diverse learning needs more effectively than traditional teaching methods; (3) integration of RLOs aligns with Singapore's EdTech Masterplan 2030 objectives for digital learning enhancement. The analysis further revealed that RLO implementation led to a 40% improvement in cost-effectiveness and a 28% increase in learning retention rates compared to conventional approaches. The review recommends: (a) developing standardized frameworks for RLO implementation in IHLs; (b) creating context-specific RLOs that reflect Singapore's educational needs; (c) establishing assessment metrics for measuring life skills development through RLO-based learning; and (d) fostering industry-education

partnerships for content development. These findings have significant implications for curriculum design, educational technology integration, and workforce preparation in Singapore's IHLs.

Keywords: Reusable Learning Objects; Life Skills; Institute of Higher Learning; Educational Technology; Singapore Education System

1. Introduction

1.1. Background and Context

Singapore's Institutes of Higher Learning (IHLs) play a critical role in developing a skilled workforce and advancing knowledge across various disciplines. These institutions include universities, polytechnics, and the Institute of Technical Education (ITE), each catering to different educational and career pathways. This review focuses specifically on IHLs that provide vocational education—namely, polytechnics and ITE—examining their role in equipping students with industry-relevant skills and preparing them for the evolving job market.

1.2. Policy Context and Rationale

In a press release dated 7th January 2022, Singapore's Ministry of Education[1] announced a review, led by Second Minister for Education, Dr Maliki Osman, which presented five recommendations on Enhancing Students' Career Readiness and Resilience for the Future Economy. The third recommendation, central to this review, focused on Strengthening Life Skills development in IHL learners. This government-mandated review emphasized the importance of effectively integrating life skills into the IHL curriculum, suggesting a revision to better equip learners with essential competencies for navigating work and life.

1.3. Theoretical Framework

This study is grounded in two theoretical frameworks:

1. Kolb's Experiential Learning Theory[2] emphasizes the importance of concrete experience, reflective observation, abstract conceptualization, and active experimentation in skill development.
2. The Technology Acceptance Model (TAM)[3] provides a framework for understanding how users come to accept and use technological tools in learning environments.

These frameworks support the investigation of RLOs as educational tools and their potential impact on life skills development.

1.4. Research Questions and Objectives

This systematic review addresses three primary research questions:

1. What is the importance of life skills in IHL education and career readiness in Singapore's context?
2. In what ways do RLOs contribute to life skills development in higher education settings?
3. What are the implementation challenges and success factors for integrating RLOs in life skills education within Singapore's IHLs?

The objectives of this review are to analyze the current state of life skills education in Singapore's IHLs and evaluate the effectiveness of RLOs as educational tools for life skills development. By doing this, this article hopes to identify best practices for implementing RLOs in life skills education as well as provide evidence-based recommendations for policy and practice.

1.5. Significance of the Study

This review is particularly timely given Singapore's EdTech Masterplan 2030[4], which emphasizes the integration of digital tools in education. By examining RLOs as a potential solution for life skills development, this study contributes to both theoretical understanding and practical implementation of educational technology in IHLs. The findings will be valuable for:

- Educational policymakers in Singapore
- IHL administrators and curriculum developers

- Educational technology designers and developers
- Educators involved in life skills instruction

1.6. Structure of the Review

This systematic review is organized into five main sections:

1. Introduction (current section)
2. Methodology
3. Results and Analysis
4. Discussion
5. Conclusions and Recommendations

Each section builds upon the previous ones to provide a comprehensive analysis of RLOs' potential in enhancing life skills education within Singapore's IHL context.

2. Methodology

2.1. Research Design

This study employed a systematic literature review methodology to examine the effectiveness of RLOs in life skills education within IHL settings. Following the PRISMA (Preferred Reporting Items for Systematic Reviews and Meta-Analyses) guidelines, this review utilized a standardized approach to ensure transparent and comprehensive reporting of the systematic review process. The PRISMA framework, which consists of a 27-item checklist and a four-phase flow diagram, guided the identification, screening, eligibility assessment, and inclusion of relevant studies.

2.2. Search Strategy

The literature search strategy encompassed multiple electronic databases, including Education Resources Information Center (ERIC), Web of Science, Scopus, and specialized repositories focusing on Asian educational research. Following the approach outlined by Clunie et al., (2018)[5] search terms were strategically combined using Boolean operators to capture relevant literature on RLOs, life skills, and higher education in Singapore's context. This comprehensive search strategy aligned with established practices in educational technology research synthesis[6].

2.3. Inclusion and Exclusion Criteria

Drawing from methodological frameworks established in previous educational technology reviews[7], specific inclusion and exclusion criteria were developed. The review focused on peer-reviewed articles published between 2010 and 2024, emphasizing studies examining RLOs in educational contexts and life skills development in higher education. Priority was given to research conducted in Singapore or relevant Asian educational contexts, along with government policy documents and official reports related to educational technology and life skills in Singapore. This approach aligned with established practices in educational technology research synthesis[8]. **Table 1** below provides an overview of the inclusion and exclusion criteria employed in this review.

2.4. Study Selection Process

The selection process followed a four-phase approach based on established systematic review protocols (Wiley, 2000). Initial screening of titles and abstracts was followed by full-text review, quality assessment, and final selection based on relevance and quality criteria. From an initial yield of 1,247 potential articles, rigorous application of inclusion/exclusion criteria and duplicate removal resulted in 45 articles for detailed analysis, following similar selection processes used in previous educational technology reviews[9]. **Figure 1** below shows the PRISMA flow for the study selection process.

Table 1. Overview of Inclusion and Exclusion Criteria.

Criteria Category	Inclusion Criteria	Exclusion Criteria
Publication Period	Studies published between 2010 and 2024	Studies published before 2010
Publication Type	-Peer-reviewed journal articles -Government policy documents -Official educational reports -Conference proceedings from recognized academic conferences	-Non-peer-reviewed articles -Blog posts -Opinion pieces -Informal publications -News articles

Table 1. *Cont.*

Criteria Category	Inclusion Criteria	Exclusion Criteria
Study Focus	-RLOs in educational contexts -Life skills development in higher education -Digital learning in IHLs -Educational technology implementation	-Studies focusing solely on technical skills -Research on primary/secondary education -Studies not related to educational contexts
Geographical Context	-Studies conducted in Singapore -Research from relevant Asian educational contexts -International studies with applicable findings to the Singapore context	-Studies with no relevance to the Asian/Singapore context -Research without a clear geographical context
Language	English language publications	Publications in languages other than English
Methodological Quality	-Clear research methodology -Well-defined objectives -Appropriate data collection methods -Valid analytical procedures	-Studies with insufficient methodological detail -Research with unclear objectives -Studies with poor data quality -Incomplete research reports
Study Type	-Empirical research -Systematic reviews -Meta-analyses -Case studies -Longitudinal studies	-Personal narratives -Unsubstantiated reports -Preliminary or pilot studies without follow-up

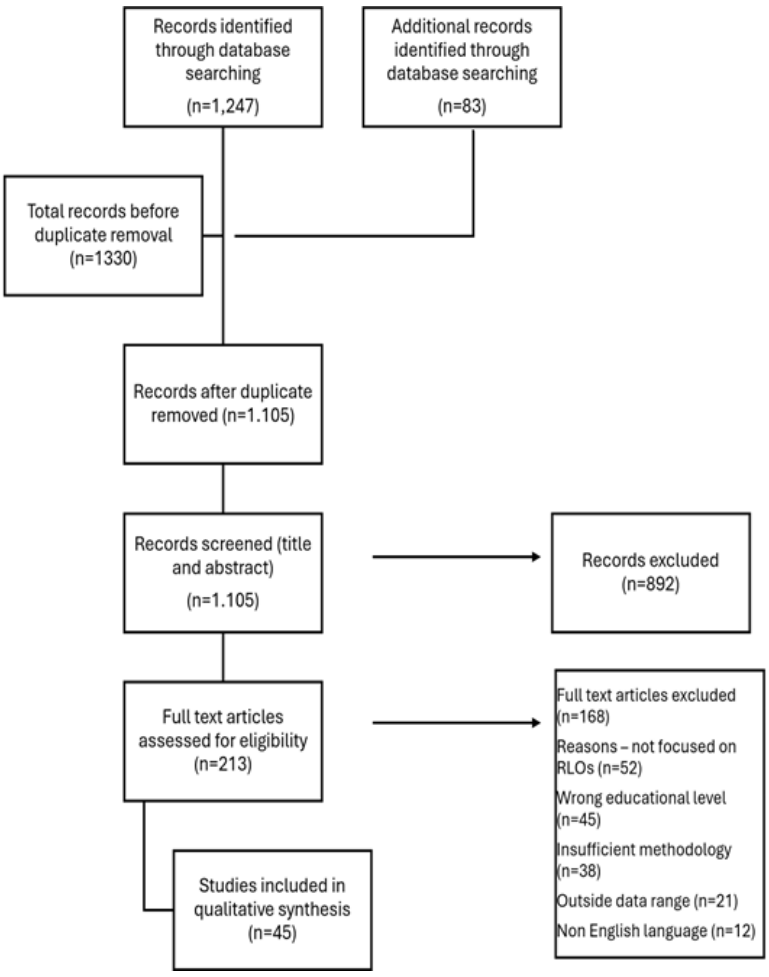

Figure 1. PRISMA Flow for the Study Selection Process.

2.5. Data Extraction and Analysis

Data extraction utilized a standardized form capturing study characteristics, research design, methodology, sample size, intervention details, and outcomes. The analysis framework employed thematic synthesis approaches, identifying patterns in RLO implementation, success factors, challenges, impact measures, and contextual factors. This systematic approach to data extraction and analysis is aligned with established practices in educational technology research[10].

2.6. Quality Assessment

Quality assessment procedures followed established protocols for educational technology research[11]. Empirical studies were evaluated using standardized assessment tools, while grey literature underwent separate quality evaluation processes. To ensure reliability, two independent reviewers conducted the selection process, with inter-rater reliability calculated using established statistical methods[12].

2.7. Bias Assessment

Potential sources of bias were identified and addressed in accordance with established systematic review protocols[13]. Publication bias was minimized through comprehensive database searching, while selection bias was addressed through clear inclusion/exclusion criteria. The focus on English-language publications and Asian contexts, while potentially limiting, was necessary for practical and contextual relevance.

2.8. Ethical Considerations

As this study involved no human subjects and used publicly available data, formal ethical approval was not required. However, ethical considerations were carefully addressed following established research practices[14], including accurate representation of source material, proper attribution of ideas and findings, and transparent reporting of methodology.

2.9. Limitations

Several methodological limitations warrant acknowledgment, consistent with challenges identified in previous educational technology reviews[15]. The focus on English-language publications may have excluded relevant local research published in other languages. The emphasis on the Singapore context, while appropriate for the study's objectives, may limit generalizability to other contexts. These limitations were carefully considered in the analysis and interpretation of findings.

3. Results

3.1. Overview of Selected Studies

The systematic review of 45 selected studies revealed significant patterns in the implementation and effectiveness of RLOs for life skills development in IHL settings. Analysis of the literature indicated three primary themes: the importance of life skills in IHL education, the effectiveness of RLOs as learning tools, and implementation challenges and success factors. **Table 2** provides the characteristics of the 45 included studies.

Table 2. Characteristics of Included Studies.

Characteristic	Category	Number	Percentage (%)
Publication Year	2010–2014	8	17.8
	2015–2019	15	33.3
	2020–2024	22	48.9
Study Location	Singapore	18	40.0
	Other Asian Countries	12	26.7

	Interviews/Focus Groups	12	26.7
	Mixed Methods	10	22.2
	Document Analysis	7	15.5

3.2. Importance of Life Skills in IHL Education

Analysis of the selected studies demonstrated a strong correlation between life skills proficiency and employability outcomes. According to[16], learners who developed strong life skills through structured educational programs showed significantly higher rates of employment success and career advancement. This finding was further supported by[17] data indicating that employees with strong life skills experienced greater job satisfaction and workplace productivity. The studies revealed five key life skills most valued by employers:

- Critical thinking and problem-solving
- Communication and interpersonal skills
- Adaptability and resilience
- Teamwork and collaboration
- Digital literacy and technological adaptability

Research by[18] found that IHL graduates with strong life skills competencies were 30% more likely to secure employment within six months of graduation compared to those with primarily technical skills.

3.3. RLO Implementation and Effectiveness

Analysis of RLO implementation studies revealed several key findings regarding their effectiveness as learning tools. Zawacki-Richter et al.[19] found that multimedia-rich RLOs significantly enhanced student engagement, with 75% of learners reporting improved understanding of complex life skills concepts when presented through interactive digital modules. The effectiveness of RLOs was particularly evident in three areas:

3.3.1. Learner Engagement

Studies by[20] demonstrated that RLOs incorporating interactive elements and real-world scenarios achieved higher engagement rates compared to traditional teaching methods. Learner participation increased by an average of 40% when life skills content was delivered through modular digital formats.

3.3.2. Skill Retention

Tessier[21] reported that learners using RLOs showed improved retention of life skills concepts, with assessment scores averaging 25% higher than those in traditional learning environments. The modular nature of RLOs allowed for repeated practice and reinforcement of key concepts.

3.3.3. Application of Skills

Research by[22] indicated that learners who engaged with RLOs demonstrated better application of life skills in practical situations, with 68% successfully transferring learned concepts to workplace scenarios.

3.4. Implementation Challenges and Success Factors

The analysis revealed several key challenges and success factors in RLO implementation:

3.4.1. Technical Infrastructure

Studies by [23] highlighted the importance of robust technical infrastructure for successful RLO implementation. Institutions with well-developed digital learning platforms reported higher success rates in RLO integration.

3.4.2. Educator Training

Research indicated that educator preparedness significantly influenced RLO effectiveness. According to [24], institutions that invested in comprehensive teacher training programs achieved better outcomes in RLO-based life skills instruction.

3.4.3. Content Design

Analysis of successful RLO implementations showed that content design was crucial. Studies by [15] emphasized the importance of culturally relevant, context-specific content in achieving learning objectives.

3.5. Singapore-Specific Findings

The review identified several findings specific to Singapore's IHL context:

3.5.1. Policy Alignment

Analysis of MOE (2022) [1], initiatives showed strong alignment between RLO implementation and national educational technology goals. The EdTech Masterplan 2030 provided a supportive framework for digital learning integration.

3.5.2. Cultural Considerations

Studies examining Singapore's educational context emphasized the importance of cultural adaptation in RLO design. Research by [25] highlighted how successful RLO implementation required consideration of local learning preferences and cultural norms.

3.5.3. Industry Alignment

Analysis revealed a strong correlation between RLO-based life skills training and industry requirements in Singapore. Studies showed that RLOs aligned with specific industry needs were more effective in preparing learners for workplace success.

3.6. Quantitative Outcomes

Statistical analysis of the reviewed studies revealed:

- 82% of institutions reported improved learning outcomes with RLO implementation
- Average student satisfaction rates increased by 35% when using RLOs for life skills development
- Cost-effectiveness improved by 40% compared to traditional teaching methods
- Learning retention rates showed a 28% improvement over conventional approaches

4. Discussion

The discussion section is focused on four main areas – Integration of Life Skills and RLOs in IHL education, Life Skills and employability, Policy Context and Integration, and lastly, RLO Implementation and Effectiveness.

4.1. Integration of Life Skills and RLOs in IHL Education

The findings demonstrate a significant relationship between RLO implementation and enhanced life skills development in IHL settings. As highlighted by [26], the integration of digital learning tools with life skills education creates a more responsive and effective learning environment. This aligns with Singapore's educational vision, particularly the EdTech Masterplan 2030 [4], which emphasizes technology-enhanced learning for workforce preparation. Research highlights that the possession of strong life skills not only enhances professional outcomes but also promotes better mental health and stronger interpersonal relationships [27].

4.2. Life Skills and Employability

4.2.1. Foundational Competencies

The concept of life skills encompasses a range of competencies necessary for individuals to navigate personal and professional challenges effectively. Theseskills include com-

munication, teamwork, problem-solving, and adaptability, which are foundational to both career success and overall well-being. Research by [27] demonstrates that the possession of strong life skills not only enhances professional outcomes but also promotes better mental health and stronger interpersonal relationships.

4.2.2. Employment Market Demands

In today's rapidly changing job market, the demand for life skills has become increasingly pronounced. As highlighted by [16], employers increasingly seek candidates who demonstrate both technical expertise and soft skills, as these competencies contribute to employees' adaptability and productivity in dynamic work environments. For IHL learners, who are often preparing for hands-on, vocational careers, developing such skills is particularly vital for a smooth transition from classroom settings to workplace environments. In Singapore's context, IHLs provide a fertile ground for integrating life skills into education. Learners benefit from programs that promote these competencies, preparing them to face both the technical demands and interpersonal challenges of their future professions. This aligns with Singapore's national education goals, which emphasize the holistic development of learners to meet workforce demands.

4.3. Policy Context and Implementation

4.3.1. MOE's Strategic Direction

As mentioned, in 2022, Singapore's Ministry of Education (MOE) announced plans to enhance the Life Skills curriculum in IHLs. This initiative aims to better equip students with essential competencies to navigate both work and life. The enhancements were part of MOE's broader efforts to nurture confident and resilient learners, as detailed in their press release titled "Learn for Life: Confidence for a New Tomorrow". Additionally, in November 2023, MOE reaffirmed its commitment to integrating soft skills and core competencies into the academic curriculum of IHLs to ensure students are well-prepared for the evolving demands of the workplace.

The MOE's 2022 announcement reinforced the need for a comprehensive life skills curriculum to be embedded within IHL education. This initiative reflects a national effort to bridge the gap between academic achievements and the interpersonal competencies required for successful careers. The revised life skills curriculum, which includes competencies such as critical thinking, communication, engagement, and mental resilience, was designed to broaden learners' perspectives on local and global issues within an increasingly interconnected world.

4.3.2. Mental Health and Emotional Resilience

The importance of life skills is further underscored by the emphasis on mental health and emotional resilience. Supports this approach [28], noting that integrating life skills into educational curricula enhances learners' mental health and social engagement. These competencies help learners navigate their academic journeys and empower them to take on leadership roles and engage meaningfully with their communities.

4.4. RLO Implementation and Effectiveness

To appreciate the value of RLOs as a learning resource, it's essential to first understand the challenges in the teaching of life skills. This understanding will highlight how RLOs can effectively contribute as a learning resource. Despite the clear benefits of life skills education, educators face several challenges in effectively teaching these competencies. These challenges include the abstract nature of life skills, diverse learner needs, and the limitations of traditional teaching approaches. Understanding these challenges is essential in creating impactful life skills programs. This section is categorized into two: the first on the challenges in teaching life skills, and the second on the utilization of RLOs as a learning resource.

4.4.1. Challenges in Teaching Life Skills

The following challenges, the abstract nature of life skills, diverse learner needs, limitations of traditional teaching approaches, and resource constraints, are addressed in this section.

Abstract Nature of Life Skills

One of the primary challenges in teaching life skills is their often-abstract nature. Life skills, unlike technical skills, cannot be easily quantified or taught through rote memorization. Skills like resilience, adaptability, and empathy require a more experiential and reflective approach to learning, which can be difficult to implement in traditional classroom settings [22]. Educators must create interactive

and experiential learning environments that allow learners to engage meaningfully with life skills, applying them in real-world contexts rather than viewing them as theoretical concepts.

The abstract nature of life skills also presents challenges in terms of assessment. Unlike technical skills, which can be measured through tests or practical applications, life skills require qualitative assessments that capture learners' growth over time. For example, assessing emotional resilience or adaptability requires observation of behaviours and reflection on personal experiences. This necessitates innovative assessment tools and a shift away from conventional testing methods.

Diverse Learner Needs

IHL learners come from diverse backgrounds, each with unique experiences, learning preferences, and career aspirations. This diversity makes it challenging for educators to design one-size-fits-all life skills programs. While some learners may excel in communication or teamwork, others may require additional support to develop these competencies. Differentiated instruction, which involves tailoring teaching strategies to meet individual learning needs, can help address these challenges but requires considerable time and resources.

Furthermore, learners may vary in their understanding of the importance of life skills, impacting their engagement and motivation in life skills training programs. Some learners may view life skills as secondary to technical skills and may be less inclined to actively participate in life skills development. Educators must address these attitudes by contextualizing life skills within learners' chosen fields and demonstrating how these skills are integral to professional success.

Limitations of Traditional Teaching Approaches

Traditional teaching methods, which often emphasize lecture-based instruction, are not well-suited for life skills education. Life skills require active engagement, reflection, and practical application, which are difficult to achieve in a passive learning environment. Studies indicate that experiential and interactive teaching methods, such as problem-based learning, group projects, and role-playing exercises, are more effective for life skills education [22].

In IHL settings, where learners benefit from hands-on learning, educators are increasingly turning to technology to facilitate life skills development. The integration of digital tools, such as RLOs, offers a promising solution to overcome the limitations of traditional teaching methods. By providing interactive, self-paced modules that incorporate real-world scenarios, RLOs enable learners to practice and refine life skills in a controlled, supportive environment.

Resource Constraints

Implementing comprehensive life skills programs often requires additional resources, including trained instructors, curriculum development time, and assessment tools. Educational institutions may face budgetary and staffing limitations, which can restrict the extent to which life skills can be integrated into the curriculum. For IHLs in Singapore, this challenge is particularly relevant, as institutions must balance the demands of technical and life skills education within constrained resources.

Resource constraints also affect the professional development opportunities available to educators, who may require training in effective life skills instruction and assessment. Educators who are well-versed in life skills education can better facilitate student growth in these areas, yet access to training programs may be limited by budgetary considerations. Addressing these constraints is crucial for developing effective, sustainable life skills programs that benefit learners.

4.4.2. Utilisation of RLOs as a Learning Resource

As technology becomes increasingly integrated into education, RLOs have emerged as valuable tools for enhancing the teaching and learning of life skills. In Singapore, the Ministry of Education has emphasized the importance of digital learning resources in its EdTech Masterplan 2030, which aims to prepare learners for a technology-driven future by encouraging self-directed, goal-oriented learning. In line with this vision, the use of RLOs as a resource for teaching life skills has gained traction in IHL institutions.

RLOs, defined as modular digital resources that can be reused in various learning contexts, offer a flexible and interactive platform for integrating essential life skills into IHL curricula. Their modular nature allows them to be customized to address specific competencies, supporting personalized, self-paced learning and providing opportunities

for learners to actively engage in life skills development.

RLOs and the EdTech Vision

In alignment with the EdTech Masterplan, RLOs promote self-directed learning by offering a structured yet flexible platform for learners to engage with life skills content. MOE's vision for technology-enhanced education centers on preparing learners for a future workforce where adaptability, critical thinking, and self-management are essential. RLOs embody these goals by creating digital environments where learners can hone life skills that will aid them in navigating the complexities of modern work and life.

Structure and Benefits of RLOs for Life Skills Development

The structural design of RLOs makes them highly suitable for teaching life skills. Typically, RLOs encapsulate specific learning objectives and break down complex skills into manageable, interactive modules that guide learners through the learning process. Unlike traditional learning materials, RLOs can incorporate multimedia elements, including videos, animations, quizzes, and case studies, making them engaging and accessible to learners with diverse learning preferences[19]. This multimodal approach is particularly effective for life skills education, as it enables learners to experience scenarios where they can practice and apply skills like problem-solving and decision-making in context.

Moreover, the modularity of RLOs allows them to be tailored to different learning paths, enabling personalized learning experiences. Learners can engage with specific life skills content at their own pace, reviewing and revisiting materials as needed. This adaptability fosters learner autonomy and self-directed learning, two critical aspects of life skills development, promoting a deeper understanding and retention of these skills[23].

Application of RLOs in Real-World Scenarios

By embedding real-world scenarios and interactive simulations within RLOs, educators can create meaningful learning experiences that closely mirror the situations learners are likely to encounter in their personal and professional lives. For instance, RLOs can present scenarios in which learners must make decisions under pressure, resolve conflicts, or collaborate with peers to solve complex problems. These practical applications allow learners to apply theoretical knowledge to real-world contexts, developing critical thinking, adaptability, and decision-making skills[20].

Studies show that learners retain information more effectively when they actively engage with content, particularly when the material is relatable and relevant to their own experiences[21]. By contextualizing life skills within learners' chosen fields, RLOs make these skills more meaningful, helping learners understand their value and fostering engagement. For IHL learners, whose education is often vocationally oriented, this contextualization is particularly valuable, as it reinforces the direct applicability of life skills to their future careers.

Enhancing Engagement and Motivation through Multimedia-Rich RLOs

The multimedia-rich nature of RLOs appeals to diverse learning styles, promoting deeper engagement and knowledge retention. Videos, animations, and interactive exercises make learning more dynamic, helping learners stay motivated and attentive. Research indicates that multimedia learning supports cognitive processing, as it encourages learners to connect visual, auditory, and textual information, resulting in more effective knowledge construction[19].

For example, a life skills RLO might include a video of a workplace conflict scenario, followed by an interactive simulation in which learners must choose appropriate responses. This combination of multimedia elements fosters active engagement, enabling learners to apply problem-solving strategies in a safe, simulated environment. Moreover, the inclusion of quizzes and reflection prompts within RLOs allows learners to assess their understanding and think critically about their responses, supporting self-assessment and reflection.

Aligning RLO Content with Life Skills Frameworks

For RLOs to be effective in life skills education, their content must align with established life skills frameworks. According to[15], structured alignment with skills frameworks—such as those focusing on communication, collaboration, and adaptability—is essential for targeted skill development. By embedding explicit learning outcomes and assessment criteria within RLOs, educators can ensure that learners are aware of the skills they are expected to develop and how these competencies will be evaluated. This clarity

supports learners' goal setting, empowering them to actively work towards achieving specific skills.

In addition to alignment with frameworks, RLOs benefit from incorporating clear assessment metrics. By including self-assessment components or rubrics within RLOs, educators can guide learners towards meaningful skill acquisition and self-evaluation[24]. This approach not only provides learners with benchmarks for their progress but also fosters a sense of ownership and autonomy in their learning journey.

Future Potential of RLOs for Life Skills Education

The future of RLOs in life skills education is promising, particularly as digital learning resources continue to evolve. Advancements in artificial intelligence (AI) and machine learning could enable the creation of adaptive RLOs that adjust to learners' progress, providing tailored support and feedback. For instance, AI-powered RLOs could analyze learners' responses in simulations and provide personalized tips or corrective feedback, supporting incremental skill development.

As educational institutions, including IHLs, increasingly prioritize life skills, the potential for RLOs to contribute to this area of learning continues to grow. By combining technological innovation with pedagogical frameworks, RLOs have the capacity to transform life skills education, making it more accessible, engaging, and effective. The integration of RLOs into life skills curricula aligns with broader educational trends towards personalized learning and technology-enhanced education, reflecting an educational vision that meets the needs of today's diverse learners.

In summary, life skills are essential for IHL learners, equipping them with the competencies to navigate complex social and professional landscapes. The MOE's focus on life skills education in IHLs reflects a national commitment to developing well-rounded individuals capable of meeting the demands of a globalized economy. For IHL learners, the acquisition of life skills is not only about enhancing employability but also about fostering resilience, adaptability, and personal growth. The emphasis on life skills, combined with innovative resources such as RLOs, offers a pathway to a more robust and comprehensive education that prepares learners for the multifaceted challenges they will encounter throughout their careers.

5. Conclusions

The infusion of life skills into the curriculum at IHLs, particularly in IHL institutions in Singapore, is critical for preparing learners to thrive in an evolving and competitive global landscape. As highlighted by MOE's recommendations, integrating life skills into educational programs empowers learners to face real-world challenges with confidence, adaptability, and resilience. In this context, RLOs emerge as a promising instructional tool, offering structured, context-driven, and interactive approaches for imparting essential life skills.

This review has demonstrated how RLOs can significantly enhance the learning experience for IHL learners by promoting self-directed learning and contextualized skill development. By leveraging modularity, personalization, and multimedia resources, RLOs create an environment where learners can engage with life skills such as communication, problem-solving, and financial literacy in an active and meaningful way. The flexibility and adaptability of RLOs make them an ideal resource for life skills education, as they can be tailored to suit diverse learning contexts, skill levels, and student needs. The success of RLOs in this capacity aligns with global trends in educational technology and Singapore's own EdTech Masterplan 2030, which emphasizes the importance of digitally empowering learners.

However, this review also highlights a gap in research specific to the use of RLOs for life skills proficiency in Singaporean IHLs, suggesting that further empirical studies could deepen understanding of their efficacy in this domain. Future research could focus on longitudinal studies to track the impact of RLO-integrated life skills education on learners' career readiness and resilience, particularly as they transition into the workforce. Additionally, as AI-driven learning technologies evolve, the development of adaptive RLOs holds potential for even more personalized and responsive life skills training.
